Please reject the NAB's petition 04-160 and to support XM Radio. I really enjoy having the traffic and weather stations for when I travel around the country. It is nice for someone who is not from the town to be able to turn to XM traffic instead of searching the FM band for a station that broadcast traffic every so often. I really enjoy the commercial free music that they offer too. If I wanted to listen to commercials I wouldn't pay the subscription fee for XM and listen to regular radio. It is time that we make way for XM technology and let it grow. XM is the new way to listen to radio. We shouldn't take it away because FM stations are losing their audience. FM is just going to have to get over the fact that they are a thing of the past...just like black and white TV and 8 track tapes.
